## Hashes Entered

The screenshot shows the CrackStation website's password cracking interface. At the top, there's a navigation bar with links for 'CrackStation', 'Password Hashing Security', and 'Defuse Security'. Below the navigation is a banner for 'Free Password Hash Cracker'. A text input field is labeled 'Enter up to 20 non-salted hashes, one per line:' followed by a large gray text area. To the right of the input field is a CAPTCHA challenge: 'I'm not a robot' with a checkbox and a reCAPTCHA logo. Below the input field, a note says 'Supported: SHA, MD5, MD4, MD2, SHA1, SHA256, SHA384, SHA512, RIPEMD160, WHIRLPOOL, Haval128, Haval256, Haval384, Haval512, MD5-HMAC, SHA1-HMAC, SHA256-HMAC, SHA384-HMAC, SHA512-HMAC, RIPEMD160-HMAC, WHIRLPOOL-HMAC, Haval128-HMAC, Haval256-HMAC, Haval384-HMAC, Haval512-HMAC'. There are three columns below the input field: 'Hash', 'Type', and 'Result'. The 'Hash' column contains several hash strings. The 'Type' column shows 'salted' for most entries. The 'Result' column is currently empty. A link 'Download CrackStation's Wordlist' is visible. Below the input field, there's a section titled 'How CrackStation Works' with detailed technical information about how it generates pre-computed lookup tables.

## Cracked Output

The screenshot shows the same interface after some hashes have been cracked. The 'Result' column now displays the recovered passwords. For example, the first hash '5f4db4c77348834b2e8d7a89d475b48e' is identified as 'salted' and its result is 'password'. Other rows show similar results like '123456', 'password', 'hello world', etc. The table has a green header row with columns 'Hash', 'Type', and 'Result'. The 'Hash' column contains many different hash strings, and the 'Type' column mostly shows 'salted'.

Hash	Type	Result
5f4db4c77348834b2e8d7a89d475b48e	salt	password
